Abstract

This poster will present the Bank of Corpora in Speech and Language Pathology which contains the speech data of native speakers of Brazilian Portuguese. Structured according to the rules of the linguistics of corpus, the collected discursive material meets the criteria of origin, purpose, composition, formation, representation, and extension. The Bank of Corpora in Speech and Language Pathology encompasses an extensive quantity of transcriptions and recordings in video and audio, of therapy sessions and non-therapeutic sessions. The corpora consist of interaction data of people of different sex and age groups, with and without different alterations of language, and thus allows scientific research at a variety of levels. Our purpose is to spread awareness of the Bank's existence and to implement the interchange of research projects, results, and ideas in speech and language pathology and therapy. CNPq process n° 521010/95-0.
